FIRST APPENDIX TO THE SIXTH EDITION OF DANA S SYSTEM OF MINERALOGY VOLUME 1

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 edition. Excerpt: .of pulverulent silica. Occurs at Kfitz, near Rakonitz, Bohemia, at the formerly worked antimony mines. Named after Professor H. Hofer of Leoben. Hopeite, p. 808.-Crystals described from Moresnet, Belgium, G. Cesaro, Mem. Acad. Belg., 63, 1897. Humite Group, p. 535.--Analyses on carefully selected material, identified by crystallographic study, have enabled Penfield and Howe (Am. J. Sc., 47, 188, 1894) to establish the following formulas for the three species of the group: These formulas vary progressively by an increase of one molecule of (Mg, SiO₄), and this variation is closely connected with the crystallization (see Miti., p. 534). The vertical axes are in the ratio of 5: 7: 0, that is, of the total number of magnesium atoms present. The same result was reached at nearly the same time by Hj. Sjogren, Bull. G. Inst. Upsala, 2, 39-54, 1894. Penfield and Howe also remarked that another member of the series, having the composition MgMg(P, OH)SiO₄, was to be expected, whose axial ratio should be about 1 086:1:1 887, 0 = 90. This would then give for the vertical axes of the four compounds the ratio of 3: 5: 7: 9. A member of the group having this form was later discovered by Hj. Sjogren and called Proleetite. Though not yet analyzed, its composition is probably expressed by the formula given above. See Proleetite. Cf. also Lewis, Min. Mag., 11, 137, 1896. A full study of the form and optical characters of crystals of the three...
